PROFESSIONAL SUMMARY

Results-driven Data & Insights Analyst with 5+ years of experience across FMCG, retail and logistics, turning large, multi-source datasets into commercial insight, pricing decisions and executive-ready reporting. Engineering background, transitioned into applied data analytics; built automated reporting frameworks (up to 87.5% turnaround reduction), delivered pricing, margin and behavioural insight across portfolios of 80+ retail divisions and 18,000+ stores, and used segmentation and trend analysis (RFM, MMX, retail transaction data feeding syndicated platforms incl. Circana and Nielsen) to inform commercial and category strategy for global FMCG brands. Strong cross-functional partnering across Finance, Operations and Marketing, with a track record of presenting findings directly to senior leadership (CFO, COO, HRVP level).

CORE SKILLS

Data Analysis & BI Tools: SQL (PostgreSQL), Power BI (DAX, dashboards & reporting solutions), Advanced Excel (Pivot Tables, Modelling, Power Query), Python, Databricks

Reporting & Business Intelligence: Dashboard Development, KPI Reporting, Automated Reporting Frameworks, Self-Serve Reporting, Process Standardisation

AI-Enabled Tools & Automation: Copilot, ChatGPT, Claude (applied to analysis, reporting and process improvement)

Data Quality & Governance: Data Cleansing, Data Enrichment, Data Accuracy & Consistency, Structured Documentation and Process Governance

Insight Generation: Trend & Pattern Identification, Behavioural Analysis, RFM & Customer Segmentation, Market Context Reporting

Commercial & Pricing Analytics: Pricing & Margin Analysis, Bid/Rate Modelling, Promotional Optimisation, P&L Reporting, Forecasting, Scenario Modelling

Stakeholder & Communication: Cross-Functional Partnering (Finance, Operations, Marketing, HR), Requirement Gathering, Senior/Executive Presentations, Technical & Non-Technical Communication and Storytelling

Domain Exposure: Retail, FMCG, Logistics & Supply Chain, Syndicated Data Ecosystems (Transaction data feeding Circana/Nielsen), ROAS & Campaign Analytics

PROFESSIONAL EXPERIENCE

Analytics Consultant | LTIMindtree | May 2024 - April 2026

As a pivotal member of Catalina Marketing's MMX & Commercial Analytics team at LTIMindtree, leading a team of 3; analysing customer shopping behaviour to evaluate brand strategy outcomes, reporting to the Executive Director, Catalina Marketing. My role is central to shaping promotional and media strategy for global FMCG brands through ROAS, redemption and year-on-year performance insights.

Achievements

- Reduced report preparation time by 66% by redesigning and automating file preparation and reporting workflows, enabling stakeholders to act on insights significantly faster.
- Built Power BI dashboards and automated Excel reporting frameworks that cut manual reporting effort by 30%, delivering consistent and repeatable visibility of revenue, margin and promotional KPIs.
- Recognised with the Super Crew Award (3x) for outstanding performance in commercial analytics delivery and stakeholder impact.

Key Deliverables

- Delivered multi-division performance analysis across 80+ US grocery, drug and mass retail divisions spanning 18,000+ stores - surfacing pricing risks, margin opportunities and promotional trends at product and sub-brand level.
- Analysed retail transaction data that feeds into syndicated platforms (Circana, Nielsen), identifying category trends and brand performance shifts to inform market context reporting for senior FMCG stakeholders (Nestlé Purina, L'Oréal, Kraft).
- Revamped analytics models in SQL and Advanced Excel to assess incremental revenue, ROAS, redemption rates and contribution by segment - directly informing promotional strategy and investment decisions.
- Conducted RFM-based consumer segmentation to uncover shifts in buyer behaviour and emerging customer cohorts, informing brand and category strategy.
- Translated complex, multi-source datasets into clear executive-ready recommendations for senior commercial and marketing stakeholders across global retail clients.

Data Analyst | Xpressbees | June 2022 - May 2024

As a key member of the Analytics team at Xpressbees, I translate delivery, incentive and workforce data into actionable insights for senior leadership, reporting to the Analytics Manager while partnering closely with the CFO and HRVP. My role plays a critical part in driving operational efficiency, cost optimisation and data-led decision-making across last-mile logistics.

Achievements

- Identified a productivity ceiling in the rider incentive program through behavioural analysis of delivery and payout data - redesigned the incentive structure from a flat to incremental slab model, presented the business case to the CFO, COO and HRVP, ran a 3-day pilot, and achieved ~15% improvement in delivery volumes and incentive ROI without increasing spend.
- Built a reporting automation solution that decreased turnaround time by 87.5%, delivering reports 8x faster and freeing analyst capacity for higher-value commercial work.
- Improved on-time delivery rates by 10% and reduced customer complaints by 25% through data-led operational analysis and structured recommendations to operations and leadership teams.

Key Deliverables

- Developed a location-level demand forecasting model incorporating historical volumes, seasonality adjustments and percentage distribution across sites - enabling data-driven workforce planning and reducing excess manpower costs.
- Built and maintained Power BI and Excel dashboards tracking cost-per-delivery, revenue per route and margin performance KPIs across logistics operations.
- Partnered with Finance and HR to deliver P&L and performance reporting, ensuring accuracy and consistency of revenue and cost data across business units.

Data Analyst | Delhivery | March 2020 - May 2022

As a key member of the Pricing & Bid Analytics team at Delhivery, I lead data and reporting support for a 5-member on-ground team, reporting directly to the Pricing Director. My role plays a critical part in translating field-level data into bid pricing and margin decisions that drive profitable, confident bidding outcomes.

Achievements

- Grew bid profitability by ~5% by replacing ad hoc decision-making with structured margin and lane-level analysis - recovering profit previously lost to process gaps and miscommunication.
- Eliminated false bids to zero by streamlining bid reporting and removing back-and-forth communication between teams, resulting in no last-minute uninformed pricing moves.

Key Deliverables

- Led a team of 5 analysts, driving workflow improvements and building repeatable reporting processes across the business unit.
- Analysed RFQs and built bid pricing reports modelling rate-to-margin scenarios across bidding lanes - giving stakeholders clear visibility of profit yield per rate and enabling faster, more confident decisions on time-sensitive bids.

EDUCATION

Bachelor of Technology | Galgotias University | 2015 – 2019

Engineering background; transitioned into data, commercial and insights analytics, building 5+ years of applied experience across FMCG, retail and logistics.
